Segall Bryant & Hamill acquired Denver Investment Advisors LLC on 4/30/2018. Performance results before this date reflect returns generated by the portfolio managers at Denver Investment Advisors LLC.

⁵Performance data quoted represents past performance and does not guarantee future results. Performance information for the institutional class shares prior to their inception is based on the performance of the retail class. Current performance may be lower or higher than the performance quoted. To obtain current performance as of the most recent month-end, visit www.sbhffunds.com. Average annual total returns reflect the reinvestment of dividends, capital gains distributions, all fee waivers and expense reimbursements. Without the fee waivers and expense reimbursements, total return figures would have been lower. Investment return and principal value will vary, and shares, when redeemed, may be worth more or less than their original cost. Segall Bryant & Hamill fund shares are not insured by the FDIC, the Federal Reserve Board or any other agency and are subject to investment risk.

⁶From May 1, 2019 until at least April 30, 2020, the Adviser has contractually agreed to waive the investment advisory and/or administration fees and/or to reimburse other expenses (not including acquired fund fees and expenses, taxes, brokerage expenses, and extraordinary expenses) in the same proportion, so that the ratio of expenses to average net assets as reported in the Fund's Financial Highlights will be no more than 0.65% and 0.50% for the Fund's Retail Class and Institutional Class, respectively, for such period. This agreement may not be terminated or modified by the Adviser prior to April 30, 2020 without the approval of the Board of Trustees.

30-Day SEC Tax-Adjusted Yields (%)⁷

	32.0%	37.0%
30-day SEC Tax-Adjusted Yield	3.47	3.75
Retail class 30-Day SEC Yield with Expense Waivers	2.36	2.36

⁷Based on federal income tax rate above. Tax equivalent yields do not reflect tax credits, exemptions, and itemized deduction phaseouts or the impact of federal and/or state alternative minimum taxes. Tax-adjusted yields are for illustrative purposes as portfolio changes can shift the mix of taxable and tax exempt bonds, thereby affecting the after tax yields. Please consult your tax advisor for further details.

First Quarter Review

For the first quarter of 2019, the municipal market posted its strongest quarterly return since 2014 (based on the Bank of America Merrill Lynch US Municipal Securities Index). With the U.S. Federal Reserve proclaiming a pause in its interest rate hikes, the municipal bond market rallied to lower rates across the yield curve. Demand for tax free income has been robust, particularly in some of the high tax states that have been hurt by the recent elimination of the state & local tax exemption. New supply of municipal bonds coming to market has been quite limited as local communities continue to forego new projects requiring external funding. These supply and demand dynamics, along with a general fall in taxable interest rates, led to the sharp rally in municipal bonds during the quarter. Although the taxable U.S. Treasury yield curve inverted this quarter, the municipal yield curve remained steeply upward sloping, offering very meager yields on bonds with maturities under five years and very attractive yields on bonds with over ten years to maturity.

Fund Performance

The Segall Bryant & Hamill Municipal Opportunities Fund returned 2.52% for the first quarter of 2019. This compares to the 2.51% return posted by its benchmark, the Bloomberg Barclays Municipal Bond 1-15-year Index. The Fund continued to benefit from its yield advantage versus the benchmark through its emphasis on high quality, overlooked securities. The Fund was positively impacted as interest rates fell sharply, particularly with its longer maturity holdings that performed very well as yields fell. The Fund was negatively impacted by a few poorly performing securities that trailed the strong performance of other bonds in the benchmark.

Economic Outlook and Positioning

The U.S. Treasury market is projecting a much different outlook than the stock market. The inverted U.S. Treasury yield curve and the very low rates offered on short-term municipal securities suggest the potential for a recession at the same time the stock market, approaching all-time highs, seems to be giving the “all-clear” signal. These mixed signals have us cautiously managing risk within the Fund. We will be watching other signals, such as growth in money supply aggregates, initial unemployment claims and the strength of the U.S. dollar, before making a more definitive call on the growth outlook.

The dislocation between the municipal bond market and the taxable bond market, the shape of the municipal bond yield curve and the fragmentation of the market provide us with the opportunity to find securities with attractive yields from high quality issuers. We have favored a small allocation to shorter maturity taxable corporate bonds to replace overvalued, low yielding tax-exempt municipal bonds. We believe utilizing this “cross-over” allocation will increase the Fund's current income and enhance long-term total return. Security selection remains the primary driver of long-term returns. We have constructed the Fund with high quality securities from sectors and issuers that we believe will add value over market cycles. We believe a rigorous bottom-up credit selection process and focus on market inefficiencies, which are very prevalent across the municipal bond market, are particularly valuable when it is important to assess valuations and differentiate creditworthiness and long-term stability of each holding. Our approach of generating after-tax income while reducing potential decreases in the value of our investments in down markets relative to the benchmark is designed so the Fund can meet shareholders' expectations for the role it plays as part of their fixed income allocation within a diversified portfolio.

Past performance does not guarantee future results.

The Manager Commentaries contain certain forward-looking statements about the factors that may affect the performance of the Funds in the future. These statements are based on Fund management's predictions and expectations concerning certain future events and their expected impact on the Funds, such as performance of the economy as a whole and of specific industry sectors, changes in the levels of interest rates, the impact of developing world events, and other factors that may influence the future performance of the Funds. Management believes these forward-looking statements to be reasonable, although they are inherently uncertain and difficult to predict. Actual events may cause adjustments in portfolio management strategies from those currently expected to be employed.

Source for Bloomberg Barclays U.S. 1-15 Year Municipal Bond Index data, CMS Bond Edge.

The **Bloomberg Barclays U.S. 1-15 Year Municipal Bond Index** measures the performance of investment grade (Moody's Investor Services Aaa to Baa, Standard and Poor's Corporation AAA to BBB) general obligation and revenue bonds with maturities ranging from 1 to 17 years. It is a broad index that is representative of the tax-exempt bond market.

DEFINITION OF TERMS

Credit Quality: The credit quality of the investments in the Fund's portfolio does not apply to the safety and stability of the Fund and are subject to change. Ratings are assigned by one or more Nationally Recognized Statistical Rating Organizations (NRSRO), such as Standard & Poor's, and typically range from AAA (highest) to D (lowest). When ratings from two NRSROs are available, the lowest rating is used. Bonds not rated by an NRSRO are included in the Not Rated category, which does not necessarily indicate low quality.

Average Maturity: The date on which a bond, other debt or security is due to be repaid.

Average Duration: A measure of price sensitivity resulting from changes in the yield of a bond.

REIT: A REIT is a real estate investment trust. REITs are securities that sell like a stock on a major exchange. REITs invest directly in real estate, either through properties or mortgages.

Standard Deviation: A statistical measure of the historical volatility of a fund.

Yield Curve: A yield curve is a line that plots the interest rates, at a set point in time, of bonds having equal credit quality but differing maturity dates. The most frequently reported yield curve compares the three-month, two-year, five-year, 10-year and 30-year U.S. Treasury debt.

BOND RATING CATEGORIES

AAA: An obligation rated "AAA" (Aaa) has the highest rating assigned by Standard & Poor's (Moody's). The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA: An obligation rated "AA" (Aa) differs from the highest rated obligations only in small degree. The obligor's capacity to meet its financial commitment is very strong.

A: An obligation rated "A" (A) is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB: An obligation rated "BBB" (Baa) exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Below BBB: Obligations rated "BB" (Ba), "B" (B), "CCC" (Caa), "CC" (Ca) and "C" (C) are regarded as having significant speculative characteristics. "BB" (Ba) indicates the least degree of speculation and "C" (C) the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

Non-Rated: These bonds are not rated.
